*Financial Peace of Mind in All Market Conditions*

# Executive Summary

*Financial Peace of Mind in All Market Conditions*

# *The Problem: Sequencing Risk in Retirement*

- Lower-risk investors — especially retirees — don't just want returns. People protect homes, cars, health... but often skip protecting their retirement capital.
- Using dollar cost averaging as a risk management tool is not possible when no longer earning a salary
- The sequence of returns, with early losses in retirement, will end up with a vastly different outcome despite identical average returns

Gyrostat is designed for lower risk investors who want financial peace of mind in any market

# The Hidden Impact of Sequencing Risk

## Assumptions

- Starting Balance: \$1,000,000
- Annual Withdrawals: \$60,000 (beginning of each year)
- Return Profile: Same average return (6.0%)
- Timing: Returns after withdrawals
- Key Insight: Two retirees with identical average returns may end up with vastly different outcomes.
- Early losses in retirement compound negatively with drawdowns.
- One retiree ends with ~\$360,000 less after 10 years, purely due to return order.

Class A

Class B

Source: Gyrostat graph of approved performance

Our Class A flagship fund has 3 key features:

1. Lower risk: 14-year track record no quarterly losses > 3%
2. A track record of increasing in value on major market falls
3. Absolute return with a track record of increasing with market volatility

The leveraged Class B Units have a focus on greater returns and less risk protection.

Non-correlated with the market for all scenarios.

# Diversification for All Market Scenarios

Strategy	Key Attributes	Falling Market (Inc. Large Market Falls)	Volatile Market	Stable Market	Rising Market
Diversify risk – Conservative/Growth Mix	Relies on correlation spread across asset classes	Unfavorable – Correlation often rises in crisis	Unfavorable – Capital losses	Favorable	Favorable
Occasional Protection via Predictions	Requires accurate timing to be effective	Unfavorable – Exposed if wrong	Unpredictable – Gains/Losses	Favorable	Favorable (May be Capped)
Protection Always in Place – Absolute Return (Gyrostat)	Non-correlated beta with embedded put protection; thrives on volatility	Very favorable (Class A), favorable (Class B)	Favorable (Class A), very favorable (Class B)	Less Favorable (Lower Return)	Favorable (Mitigated Upside)

# Investment cycles – major sell offs a regular feature

# *Portfolio structure to address uncertainty – not predictions*

- Investors who include non-correlated assets generate smoother returns in a broad range of market scenarios (not just rising markets)
- Our investment strategy takes advantage of the inherent fluctuations in stock prices
- Investors biggest regrets are often through inactions, not actions, particularly where the consequences of failing to act threaten your lifestyle.

# Portfolio Construction Process

*Financial Peace of Mind in All Market Conditions*

# How Does Gyrostat Construct its Portfolio?

There are 3 steps in our risk management investment approach:

- Buy stock** [approx. 95% capital deployed in stock]
- Set risk management overlay** [approx. 5% capital]
- Re-set** dynamic risk managed overlay with market moves

ASX 20 stocks and index with protection at stock specific level

Two-dimensional pay-off with capital at risk within pre-defined risk tolerance

Protection reliably increases in value on stock price falls

# *Our Edge – Taking Advantage of The Inherent Fluctuations in Stock Prices*

- With our approach we do not need to debate conflicting market views, it is the differing market predictions and general uncertainty that generates our returns
- Our investment strategy takes advantage of the inherent fluctuations in stock prices
